

Swamped By Threats- Broad Swamp Appreciation Day

A morning of learning all about the plants of Newnes Plateau Shrub Swamps

Newnes Plateau Shrub Swamps are an endangered ecological community found only on the Newnes Plateau. The swamps cover fewer than 650 hectares. The community is comprised of a number of endemic and rare plants.

Broad Swamp in the Newnes State Forest is one of the best examples of Newnes Plateau Shrub Swamp vegetation.

Join plant experts Dr Ian Baird and Doug Benson for a morning of plant identification and to learn more about this endangered vegetation.

Details:

Friday 26th October
