 Name 4: 

Notes: T & L are focusing on the schedule of rates for works under 100m2, no rates for the identified sites was supplied.

Notes: Safety documents and capability were of a high standard for smaller works of up to 100m2.

Notes: T & L have had a lot of experience with small scale works for Councils, of up to 100m2.

Notes: No rates supplied for works over 100m2

Notes: Rates for work under 100m2 were very good and would recommend that Berrigave be used for works under 100m2.

Notes: Would recommend T & L for heavy patching works under 100m2 under the supplied schedule of rates.

Notes: Would recommend that Downer EDI be used for future works under the scheduled rates supplied for works over 100m2.

Notes: The prices for the selected works were well above the other applicant

Notes: The safety documents and capability were of a high standard

Notes: Downer EDI has a broad range of experience across different works locations and situations, including in the Lithgow LGA.

Notes: Downer EDI schedule of rates for over 100m2 were good but higher across the board than other applicants. These rates could still be used for future works

Notes: The rates for under 100m2 were very high, unlikely to use Downer for small patching works.

Notes: Berrigave has given a good set of rates for works over 100m2 with a good set of services available for future works.

Notes: Rates for work under 100m2 were high and would only use Berrigave in an urgent situation.
